Lighting

COLUMNS

Lighting forms an essential part of many enhancement schemes. Lighting generally takes two forms. One is the functional column and luminaires, where design may not be of importance, but specification and price are. The alternative would be decorative lighting. This is designed to be visually stimulating but to give similar levels of performance. Almost all of the designs shown in this brochure are suitable for roadside illumination.

Lighting columns 601 and 602 are manufactured from galvanised steel and are 5m high as standard.

613 + 630

Lighting

Lighting

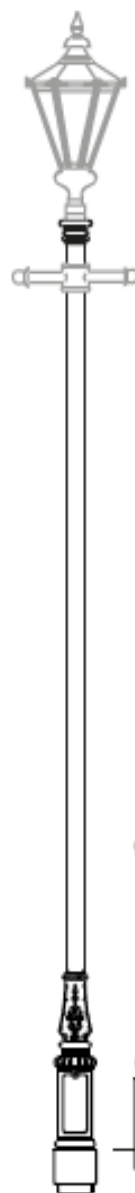

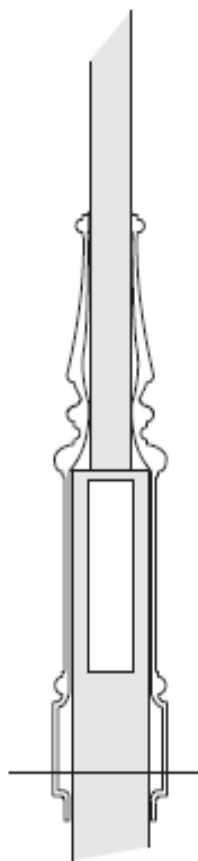

Lighting columns from 603 onwards are constructed from a galvanised steel root, base and column assembly with a fully sealed and finished cast iron decorative base. The column height can be specified, usually between 3m and 6m.
