CAST LITTER BINS

Round Bins with door

Round Bins open top

A maintenance contract is available as an option with the purchase of any bin. This gives you peace of mind that the equipment chosen will remain in perfect condition for as long as desired.

Capacities of bins vary. To help you decide on the most suitable design a simple chart is shown giving standard capacities. The capacity is of the liner only. Beware, some companies quote the capacity of the bin housing, giving the impression that their bins will hold a greater amount of litter.

Product dimensions

	width - 400*	height	capacity

CAST LITTER BINS

Square Bins
open top

All types of bin are available in open top and canopied format. Canopied bins ensure that litter remains within the confines of the bin, so left undisturbed by weather, animals or vandals.

Tough, strong and durable applies to every bin manufactured. Standard features include easily maintained hinges, slam locks and strong galvanised steel liners.

Options include customisation of wording, adding motifs or logos. To further enhance their strength, heavy duty liners are available. Another addition is the use of plastic liners which can be specified in lieu of galvanised steel. The materials used in the manufacture of litter bins are cast iron, ductile iron, cast aluminium and fabricated steel.

MAINTENANCE

A maintenance contract is offered for all cast litter bins - from simple replacement of locks and hinges to complete rebuilds.

Litter Bins

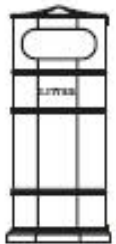

CAST LITTER BINS

Octagonal and hexagonal bins are an excellent way of enhancing town centre environments and are a welcome change from the more common square or round designs.

All types of bin are able to accept customisation. CIS Street Furniture has considerable experience in adding foreign languages, motifs, logos and sponsorship plaques to the full range of products.

If you are planning to use the bins in an internal environment then why not specify the incorporation of ashtrays to the top of the bin? Almost any bin can be converted to achieve this.

All bins are provided with tough, strong galvanised steel liners. We would also recommend that they are used in conjunction with supplementary plastic bin liners, as certain types of litter are strong in acids and may have detrimental effects leading to a seepage of effluent from the confines of any bin.

You may wish to specify the use of plastic liners which are available for most types of bin, or alternatively our 463 cast litter bin is designed to accept a wheelie bin liner and is highlighted on page 4.10.

CAST LITTER BINS

If space is at a premium then why not consider our range of wall mounted bins? Both open top and side opening variations are available. If required for internal use, ashtrays may be added. Closed top types 441 and 442 are ideal for dog waste disposal.

BOMB RESISTANT BINS

A selection of cast iron bins can also be manufactured in a Bomb Resistant format.

A specially designed liner is incorporated within the standard design of the cast bin.

The liners have all been tested to Home Office guidelines and MOD Standard UK/SC 4697, for ballistic and fragmentation protection. All have a V50 rating in excess of 600 m/sec. Full information is available from our sales office.

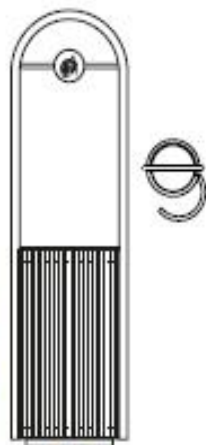

STEEL & TIMBER LITTER BINS

481 is finished painted fully galvanised steel with a galvanised steel liner.

471 has a robust internal galvanised steel frame with hardwood slats and is suitable for parks and conservation areas.

CAST LITTER BINS

The 463 cast iron litter bin has been developed in conjunction with local authority engineers to overcome the problem of operatives lifting heavy liners. Its slightly rectangular construction allows fitting of a standard wheelie bin (not normally supplied), whilst retaining similar lines to other forms of Street Furniture.

Using this system, litter removal is made easy. The complete unit is extremely durable and the wheelie bin should outlast most galvanised steel liners. Variations on this design of bin are available to suit a range of wheelie bin sizes. Ask our sales department for details.

A very important part of completing your project is the safe and correct way of fixing our products.

To help you achieve this a comprehensive installation guide has been included at the rear of this catalogue.

Should you require further advice or information relating to litter bins or any other products then please give our sales office a call.

499

CUSTOM BUILD

499 cast litter bins feature a side opening door and galvanised steel liner. Designed by the artist Tess Jaray for Leeds NHS Trust, they are being used within Jubilee Square at the Leeds General Infirmary. The engineering design, pattern making, casting and finishing were the responsibility of CIS Street Furniture.

GET IT RIGHT

Careful specification will ensure that environmental improvement schemes remain attractive past the first few weeks of installation.

Fig 1. Cheap steel bins may not be cost effective in the long term. Here vandals removed the top and will later destroy it.

Fig 1.

Fig 2. Chaining a bin to the lamppost is not a good alternative to fixing it to a substantial base. (Our installation guide at the rear of this brochure has the correct method of fixing cast litter bins.)

Fig 2.

Fig 3.

Fig 3. Plastic bins, although a cheaper alternative to cast iron, are not fire resistant. All that remains here is the steel liner.
